

# RECOMMENDATIONS FOR KITTENS & ADULT CATS

## 1. Vaccine recommendations:

- ❖ We begin the kitten series between 6 and 8 weeks of age. The following chart will show what should be given and when:

| AGE               | VACCINE NEEDED | DESCRIPTION                        |
|-------------------|----------------|------------------------------------|
| 6-8 weeks         | FVR-CP         | Upper respiratory Combo            |
| 9-11 weeks        | FVR-CP & FELV  | Upper Respiratory Combo & Leukemia |
| 12-14 weeks       | FVR-CP & FELV  | Upper Respiratory Combo & Leukemia |
| 15-17 weeks       | FVR-CP         | Upper Respiratory Combo            |
| 16 weeks or older | Rabies         | Rabies                             |

## 2. Other procedure recommendations:

- Stool check for parasites as kitten, then yearly.
- Dental cleaning and polish yearly or as often as needed.
- Spay or neuter at 4 to 6 months of age.
- If you are planning to declaw your kitten, it can be done at 4 months of age when you have him or her spayed/neutered.
- Microchip
